¹ R. Sauey proposed double count

² Starting of dry season in KNP

³ In November of 1985, 54 cranes were counted, in December of 1985 – 37. The number of juveniles has been counted among 37 Siberian Cranes.

⁴ Two cranes wintered outside KNP, in Karara Bustard Sanctuary according to G. Archibald's information (1992).

⁵ Siberian Cranes in Kunovat River Basin in the north of West Siberia had successful breeding.

⁶ Siberian Cranes appeared in Keoladeo National Park in February, 1996, only.
